## (54) REMOTE MONITOR SYSTEM AND CLIENT TERMINAL

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a remote monitor system and a client terminal, by which communication and linkage are performed with a plurality of different servers from a single Web client picture.

SOLUTION: The single Web client picture of a controller 100 such as a personal computer is divided into a plurality of frames, session is performed with each Web server 201 on a plurality of server machines 200 at every divided frame to obtain resources, each applet included in the resources is individually performed and communication is performed with a control server 202 on the

plurality of different server machines
200.
